**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

The following is a first action on the merits of application serial no. 10/668,645 filed September 23, 2003.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Hirayama (4,381,736). Hirayama discloses a temperature control circuit for a fluid cooled engine having an engine block and a cylinder head comprising: a radiator having an input and an output; an electrically driven water pump having an input and an output, the input of the electrically driven water pump being connected to a radiator output and the electrically driven water pump output being connected to a cylinder head; one or more sensors for sensing operational parameters of the engine; a controller operatively connected to the electrically driven water pump and the one or more sensors for controlling the output of the electrically driven water pump; and a mechanical water pump operatively connected to the radiator and the engine, whereby the electrically driven water pump provides auxiliary cooling to the engine.

Note: Pumps inherently contain mechanical parts and can be construed as a mechanical pump.
